

The names and therapeutic categories of drugs on this list were compiled from medication dispensing reports submitted by home infusion providers and reflect current prescribing practices in the United States. The *National Home Infusion Association (NHIA) Home Infusion Drug List* may serve as a reference for decisions related to the site of care for administering drugs requiring intravenous or subcutaneous infusion. This list contains only the prescribed drugs and does not endorse home infusion for patients who do not meet the criteria for safe administration in the home or alternate site of care. NHIA members and other practitioners using the list should exercise independent judgment and provide the patient with a choice in their site of care decision based on their individual situation. Additionally, not all home infusion providers offer every medication included on the list. Providers may specialize and only offer certain therapies.

The *NHIA Home Infusion Drug List* was developed collaboratively by NHIA staff and member volunteers comprised of pharmacists, nurses, and other professionals with extensive experience and expertise in the field of home infusion. The NHIA Quality and Standards Committee reviewed the list by category and drugs included for accuracy. The category selected for each medication was based on

the chemical form of the active ingredient, the clinical use for a particular diagnosis, and/or the corresponding per diem where applicable. The committee members made recommendations that were incorporated prior to finalizing and approving the list and communication materials.

The target audience for the *NHIA Home Infusion Drug List* includes clinicians, regulatory agencies, reimbursement professionals, and industry stakeholders. NHIA members are U.S. licensed pharmacies with special expertise in the assessment, coordination, and professional services required to safely furnish infused drugs in the home and alternate settings. Home infusion is a service that employs a multidisciplinary team of clinicians to coordinate the sterile preparation and administration of medically necessary infused drugs to patients with acute and chronic medical conditions.

Comments/Contact: NHIA welcomes feedback and suggestions for content to incorporate into future revisions and editions. Contact: info@nhia.org.

KEY FOR SYMBOLS

Biosimilar

Indicates the drug requires HD containment strategies based on USP <800> using the current *NIOSH List of Hazardous Drugs in Healthcare Settings, 2024*. This includes either handling all medications listed with the full precautions outlined in USP 800 or performing an Assessment of Risk for drugs and dosage forms allowed by USP 800, providing alternative containment strategies and clearly defined work practices.

These drugs may qualify for coverage under Medicare Part B when dispensed by a pharmacy and administered in the home via the:

1. Current Durable Medical Equipment, Prosthetics, Orthotics, and Supplies (DMEPOS) policies: External Infusion Pump, Parenteral Nutrition, Intravenous Immune Globulin
2. Local A/B MAC policy for Hemophilia/ Blood Clotting Factor coverage.

Drugs administered in the home that are not covered by Part B DMEPOS are covered by Part D Prescription Drug Plans (PDP) pending Part D plan formulary or authorization requirements.
